

# Wireless Mini Earpiece

Stealth and works

## Introduction:

You can buy the earpiece unit or whole solution from us. The solution is actually a professional Wireless Spy Secret Service Earpiece for law enforcement, casino security and protection personnel. The tiny earbud fits into your ear and can receive audio instruction from your partner up to 3000 ft away. Just place the wallet receiver into your pocket to receive a 1-way wireless

## Application

Our products apply to people who need to rely on this type of equipment to fulfill their tasks in areas such as covert operations, close and VIP protection. Many of these tasks bring with them a high personal risk. Through the development of highly advanced technology, not only additional health risks to the users are avoided, but also the ability of combat is enhanced. This covert earpiece is widely used in many departments such as FBI, CIA, antiterrorism, security, television and films studio etc.

## Work Principle

The covert earpiece is reception equipment driven by electromagnetic induction and is used in conjunction with drive equipments which is hidden in the wallet, such as interphone, cellular phone, radio, and language training equipment etc.

## Accessories Part 1

### Inductive loop (Work with cell phone)

The inductive loop which is used in conjunction with earpiece is one of the mobile phone's accessories. Its work principle is the same as one-wired mobile phone inductive loop's.

### How to use

Wear the skin color loop on your neck or under your close if necessary. Connect the port with your cell phone and talk to the microphone just like a normal handsfree set but totally with no wire appear.

We have many type SonyEricson and Nokia brand cell phone convertors for you to choose.

## Accessories Part 2

### Purse loop ( 430-450Mhz)

Purse inductive receiver is one of wireless earpiece's accessories.  
Highlight: covert, anti-shielding

Purse inductive receiver has two ranges of frequencies, please tell me your choice in advance.  
1) 430-450 MHZ: has two fixed frequencies.  
2) 600-620MHZ: has two programmable (Option type) frequencies.  
Note: One-way receiving. Receiving distance depends on the power of radio, is about 2km-4km.

### How to use it

Put the box near your chest or handbag.

The loop will induct the earpiece to receive voices from the receive name card box.

It is one way without microphone.
