**Brief Introductions about CFL:**

Compact fluorescent lamp(CFLs) offer energy savings of 60% to 70% compared with incandescent lamps. But CFLs come in a variety of shapes-U, double-U, globe, spiral and some of the shapes are not as effeicent as straight fluorescent tubes. The staight fluoscent tubes that won energy-saving awards in china these years produce between 110 and 120 lumens per watt, while CFLs average just 55-65 lumens per watt. This makes the straight tubes more suitable for illuminating large rooms, while CFLs win out for household decorative applications.

Model No.	Picture	CFL
HL-A5132	 <p>The 'Picture' column contains two photographs of desk lamps. The top photograph shows a white desk lamp with a panda-shaped head and a black cord. The bottom photograph shows a blue desk lamp with a bear-shaped head. Both lamps have a vertical stem and a circular base.</p>	 <p>The 'CFL' column features a photograph of a single, straight, U-shaped compact fluorescent lamp tube against a dark blue background. The tube is white with two parallel fluorescent tubes. In the bottom right corner of the image, there are technical dimension lines: 'h1' for the total height, 'h2' for the height of the U-bend, and 'd' for the diameter of the tube.</p>
