

## RNF series anti-explosion soft starter

- Total digital intelligent control
- Advanced and perfect controlling method

Voltage slope starting, closed loop of current limit starting current, free stop, soft stop and soft start

- Perfect and scientific protective function

Over current protection, over loading protection and phase lacking protection

- Communication bus

Built-in Rs485 Modbus. Other communication buses for free.

- Various control types

Local control, remote control and remote and local control

- Other characteristics

Soft starter controls the soft starting process of the motor through controlling the voltage. Double single chip control is adopted in the soft starter to set start parameters freely according to loading property, thus promising strong load adaptability.
