

Door and Window Testing Machine

■ XYJ Series Angle Strength Testing Machine

Application:

This series is mainly used to test the angle strength of plastic door and window.

Features:

This series machine adopts mechanical-electrical integration structure, which is mainly composed of host machine and electric cabinet. The host machine is equipped with high precision load sensor, can realize electronic measurement, digital display and computer data process. This machine has advanced reasonable structure and stable controlling system, which assure the accuracy of the test data.

XYJ-20B

Main Technical Specifications:

1. Load range: 0-20 kN
2. Load accuracy: $\pm 1\%$
3. Loading speed: 50 ± 5 mm/min
4. Auto print the test result.
